EDUCATION

California State University Fullerton - *Master of Science in Software Engineering* 01/2026

- Member of the Association for Computing Machinery Club

National University - *Bachelor of Science in Computer Science* 05/2024

- Dean's List

EXPERIENCE

ERP Developer, PACSUN - *Anaheim, CA* 09/2025 - Present

- Architected a Python ETL pipeline using PySpark and Pandas to source, analyze, and integrate 100,000+ package IDs daily, ensuring high data integrity across multiple systems
- Collaborated on data migration using Microsoft Fabric for 5M+ records with Azure and Snowflake, maintaining documentation of data mappings and interfaces
- Developed and optimized SQL queries for Azure SQL databases to extract and interpret inventory data across 300+ locations, supporting corporate reporting needs
- Built a Power BI migration dashboard to monitor data accuracy, enabling stakeholders to proactively resolve discrepancies and ensuring 100% data parity between legacy and cloud systems
- Performed data validation of 5M+ records using Snowflake and SQL pipelines

Software Developer Intern, Boardwalk Arcade - *San Diego, CA* 01/2024 - 04/2024

- Designed a relational database to maintain data integrity across work orders, users, and departments
- Optimized MySQL queries, achieving a 60% reduction in database load time (from 0.5s to 0.2s)
- Streamlined data management by building filtering/sorting features, enabling users to retrieve records in ~0.3s and improving decision-making speed
- Collaborated with a team of 3 to compose a Python-based GUI application using Tkinter for managing work orders, improving task organization, and workflow efficiency

PROJECTS

MLB AWS RDS ELT Pipeline - [Code](#)

- Launched a fully automated ELT data pipeline, extracting daily MLB statistics via a custom Node.js service and securely streaming raw JSON data into an AWS Aurora (PostgreSQL) database
- Automated cloud-native CI/CD workflows utilizing GitHub Actions cron schedules, ensuring zero-touch daily pipeline execution and secure dynamic injection of AWS credentials
- Orchestrated in-database transformations utilizing dbt and Python, modeling raw API extracts into optimized, highly-available relational schemas for downstream analytical querying

LinkedIn Job Alert ETL Pipeline - [Code](#)

- Engineered an automated data pipeline using Apache Airflow and JobSpy to scrape daily LinkedIn job postings, implementing a scheduled ETL process that filters and formats data for real-time reporting
- Created an automated notification system that transforms unstructured job data into HTML-formatted email digests, significantly streamlining job search efficiency by delivering daily alerts
- Initiated scheduling with Airflow DAG, integrating with an SMTP server to deliver daily data reports

SKILLS

- **Programming Languages** - Python, SQL, Java, C++, JavaScript, TypeScript, X++, HTML, CSS
- **Technologies** - PySpark, Apache Spark, dbt (Data Build Tool), Microsoft Fabric, Pandas, REST APIs, NoSQL, Node.js, Flask, React, NumPy, Scikit-Learn, XGBoost, TensorFlow, Keras, PyTorch
- **Software** - SQL Server, Power BI, Tableau, MuleSoft, Microsoft Dynamics, ServiceNow, Postman
- **Databases** - Snowflake, Azure Synapse, AWS RDS, AWS Aurora, PostgreSQL, MySQL

ACHIEVEMENTS

Syracuse University Hackathon Winner - [DevPost](#)

- Prepared a full-stack web application with JavaScript and Python, competing against 50 students
- Awarded 2nd place for creativity and implementation
